txt formats are compiled using a SQL-like language, and optional tools like a waveform generator, step sequencer, and metronome are easily accessible via the included keyboard shortcuts. .txt files are easily read by other software and are text-based. Running on Windows, macOS, and Linux, Zentris 3000 is free for personal or commercial use. Features Interface The main window of Zentris 3000 includes the steps of the scale, a visual representation of the track, and a display of the keyboard shortcuts. The note mode displays the notes and rests in a graphical representation of a staff. All notes can be adjusted using the visual representation of the

staff, the keyboard, or the step sequencer. .txt files can be edited in the step sequencer, and the step sequencer can be saved for recall later in the track. The score can be edited in the keyboard view and all notes and rests are editable, and the pieces can be exported to different types of .txt files. The settings that can be customized in the interface can be accessed by pressing a button on the keyboard. Music can be edited with the keyboard, with a step sequencer that can also be seen in the interface, and with the score. Pressing a button on the keyboard makes the next piece play and pressing and releasing a button on the keyboard alternates between playing and

recording. Pressing a button in the .txt editor brings up a box with a dropdown menu that allows you to add, remove, or edit data in the .txt file. In the virtual keyboard, white keys correspond to notes and black keys to rests. Each note and rest can be played or edited with a single button press. Pressing the space bar cycles between note and rest modes. Pressing the shift key will play the next note starting from the previous note, and pressing the shift and space bar together will start recording over the previous note. Keyboard Zentris 3000 includes a 96-key keyboard. Ghost Ghost is a plugin that works alongside Zentris 3000. Ghost allows the user to place

notes on the music at the exact location that they are on the keyboard. Ghost can be enabled or disabled in the settings of Zentris 3000. Notes can be placed on the spot with the cursor, or the user can hover the mouse over the note to be placed. Ghost is enabled by default. Ghost can
