I use C#, so I should be able to convert to c# easily. A: To convert to C# I would look into using IronPython and the IronScheme library. From their site: IronScheme is a simple, open-source language for the creation of interpreters for C, C++, Objective-C, Lisp, .Net, Visual Basic, and Python in 64-bit and 32-bit versions of Microsoft Windows. It is free software. I would also be curious how much time it would take to convert your code into F# or the like. This invention relates generally to vehicle emissions treatment systems and more particularly to an exhaust gas sensor having an element with reduced oxygen catalytic oxidation of ammonia. The emission of nitrogen oxides (NOx) and other undesirable emissions from vehicles burning gasoline or diesel fuel are known to contribute to problems with acid rain, smog, and respiratory irritation. The United States Environmental Protection Agency (EPA) is currently requiring the use of aftertreatment systems on vehicles to reduce NOx emissions from passenger cars and light duty trucks. Some current emission control systems use ammonia to reduce NOx during the regeneration of a selective catalytic reduction (SCR) catalyst. For example, ammonia is known to reduce NOx to nitrogen when it is used with a selective catalytic reduction (SCR) catalyst. In the internal combustion engine space vehicle industry, space is a premium commodity. Thus, there are many constraints placed on the design and function of components in such devices. This space consideration is evident in the type of sensors used in an exhaust gas environment. Specifically, there is a need for a sensor that can detect the presence of ammonia in a vehicle exhaust and provide a corresponding signal. A method and apparatus for detecting ammonia in an engine exhaust are provided. In one embodiment a sensor is configured to detect the presence of ammonia and provide a corresponding electrical signal. The sensor includes at least one sensing electrode that is held in contact with exhaust gas and a reference electrode that provides a reference signal to the sensing electrode. The reference electrode may be in contact with ba244e880a
